WINDOW COVERINGS

Child Safe

There is nothing more important to Vista than the safety of its customers, particularly babies and young children

To avoid the possibility of young children becoming entangled or even strangled by the loops of pull cords, chain and bead cords and cords that run through window coverings, Vista would like to share some ideas with you on keeping your children away from potential harm.

Remember - always keep cords out of the reach of young children

There are several things you can do to make your windows child-safe

Keep babies' cots away from windows, and ensure your window covering cords are well out of reach – this may mean not placing furniture next to windows – toddlers love climbing!

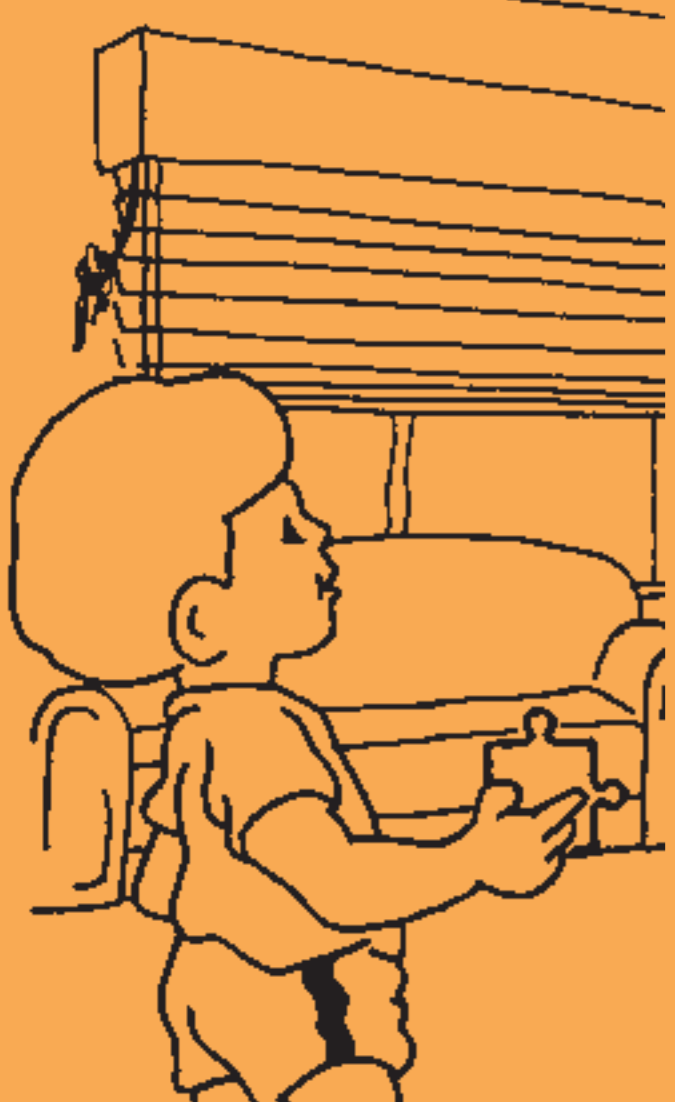

Young children can strangle in the loop of pull cords, chain and bead cords, and cords that run through window coverings. They can also wrap cords around their necks. To avoid strangulation and entanglement, keep cords out of the reach of young children.

Also:

1. Install safety devices that remove the cord loop or reduce access to cords and,
2. Move cots and furniture away from window covering cords.

The tension device (either a chain tensioner or cleat) reduces the hazards of strangulation or entanglement by limiting access to the cord or bead chain.

Anchor the device with the cord or bead chain to the wall or floor, so young children cannot pull the cord or bead chain around their neck.

Vista's SafeTrak single control wand mechanism for vertical blinds eliminates potentially dangerous chains and cords in your home. As well as being the practical solution for light control at the twist of a wand, it helps create a safer environment for children and pets.

It is important to be aware at all times of child safety around the home.
